

Overview of the National Nanotechnology Initiative

M.C. Roco

Senior Advisor for Nanotechnology, NSF

Chair, Subcommittee on Nanoscience, Engineering and Technology (NSET),
National Science and Technology Council (NSTC)

- **Motivation and timeline**
- **Outcomes in the first four years of NNI**
- **New frontiers in 2005 and long-term planning**

National Research Council, Washington, D.C., March 23, 2005

Nanotechnology

Definition on www.nano.gov/omb_nifty50.htm

- Working at the atomic, molecular and supramolecular levels, in the length scale of approximately 1 – 100 nm range, in order to understand and create materials, devices and systems with fundamentally new properties and functions because of their small structure
- **NNI definition encourages new contributions that were not possible before.**
 - novel phenomena, properties and functions at nanoscale, which are nonscalable outside of the nm domain
 - the ability to measure / control / manipulate matter at the nanoscale in order to change those properties and functions
 - integration along length scales, and fields of application

NNI - Why nanotechnology is important?

A. Reaching at the foundation of matter

Historical event in understanding, control and transformation of natural/living and manmade systems (natural threshold between discontinuous and continuous behavior)

B. The long term societal implications

Improved knowledge, quality of life, and environment
Create foundation for a technological and industrial revolution

C. Higher purpose goals than development of NT

- More basic and unifying science and education
- Higher efficiency processes and novel products
- Molecular medicine
- Extend the limits of sustainable development
- Increased coherence/integration of S&T policies

Nanotechnology development cannot be decided only by nanotechnologists

SPEED BUMP DAVE COVERLY

**Nanotechnology
promises to broadly
affect society, from
new products to art**

B. Broad societal implications

(Ex: worldwide estimations made in 2000, NSF)

- ❑ **Knowledge base**: better comprehension of nature, life
- ❑ **New technologies and products**: ~ **\$1 trillion/year by 2015**
(With input from industry US, Japan, Europe 1997-2000, access to leading experts)

Materials beyond chemistry: \$340B/y

Pharmaceuticals: \$180 B/y

Aerospace about \$70B/y

Electronics: over \$300B/y

Chemicals (catalysts): \$100B/y

Tools ~ \$22 B/y

Est. in 2000 (NSF) : about \$40B for catalysts, GMR, materials, etc.; + 25%/yr

Est. in 2002 (DB) : about \$116B for materials, pharmaceuticals and chemicals

Would require worldwide ~ 2 million nanotech workers (all ~7M)

In U.S.: ~ 0.8 million (all with supporting jobs ~ 2.8 million)

- ❑ **Improved healthcare**: extend life-span, its quality, physical capabilities
- ❑ **Sustainability**: agriculture, food, water, energy, materials, environment; ex:
lighting energy reduction ~ 10% or \$100B/y

Global forecast, products sold incorporating emerging nanotechnology, 2004 to 2014, 3 sectors

NATIONAL NANOTECHNOLOGY INITIATIVE - *from vision to the investment strategy*

- Timeline (Preparing NNI) -

- March 1991 "Nanoparticle Synthesis and Processing" (NSF program)
 - Nov. 1996 Nanotechnology Group (bottom-up)
 - March 1998 Functional Nanostructures; Partnership in nanotechnology (NSF in collaboration with other agencies)
 - Sept. 1998 NSTC establishes Interagency Working Group of Nanoscience and Engineering (IWGN)
-
- March 1999 OSTP/CT presentation on NNI, Indian Treaty Room
 - May-Sept. 1999 Congress hearings; Three publications NSTC/IWGN; Nanotechnology R&D planning in six agencies
IWGN planning for NNI
 - Oct. – Dec. 1999 OMB review – NNI the only new topic recommended
PCAST – Letter to the President supporting NNI
OSTP and WH Approval
 - Jan. 2000 NNI announced by the President in Jan 2000

NATIONAL NANOTECHNOLOGY INITIATIVE - *from vision to the investment strategy*

- Timeline FY 2001-2005 -

- Feb.–Dec. 2000 - WH, Congress review and approve FY 2001 NNI
6 agencies (NSF, DOD, DOE, NIH, NASA, NIST)
Concerns about applicability; “Societal Implications” workshop & funds
- FY 2001 14 agencies (+ EPA, DOT, DOTr, DOS, DOC-TA, DOJ, USDA, IC); \$465M
NSET signs MOU to establish NNCO ; White House support to NNI
International reaction: programs in > 30 countries (now > 60)
20 states and regional alliances begin to invest (now > 22)
- FY 2002 16 agencies (+FDA, NRC) ; \$697M
Outcomes: R&D, Education, Patents, Industry growth; NRC Review
- FY 2003 17 agencies (+ DHS); 2 Bills in Congress for FY2004-2008; \$942M
CBAN established, Research directions workshops
- FY 2004 22 agencies (+ NIOSH, CPSC, ITC, USPTO, DOC-BIS); The Law \$1,094M
Infrastructure development; Strategic Plan II (Dec. 2004); NNAP begins
- FY 2005 23 agencies (+ USDA-FS); New frontiers for nanotechnology \$1,231M

NNI Vision: a future in which the ability to understand and systematically control matter on the nanoscale leads to a revolution in technology and industry

- Changing the foundation of understanding, control, manufacturing and medicine from the macro and micro domains to the nanoscale, where all fundamental material properties and functions can be efficiently established and changed
- General purpose technology that will affect almost all sectors of the society. It will disrupt - structural changes - markets, industrial organizations and business models (ex: 50% of new products in advanced industrial areas will use NS&E by 2015)

NNI as part of the U.S. Federal R&D ~ 0.25% (2000) to 1% (2005)

U.S. NNI as part of world nanotech investment ~ 1/4 (2005)

First NNI strategic plan (2001-2005): R&D funding by Agency

<i>Fiscal year</i> (all in million \$)	<i>2000</i> Actual	<i>2001</i> Enact/Actual	<i>2002</i> Enact/Actual	<i>2003</i> Enact/Actual	<i>2004</i> Req./Actual	<i>2005</i> Req/Est.

- Industry (x1.7), state(x0.4) and local organizations: over 2 times NNI budget in 2004
- 2004 NNI budget: 65% to academia; 25% - R&D labs; 10% - industry (7% SBIR)

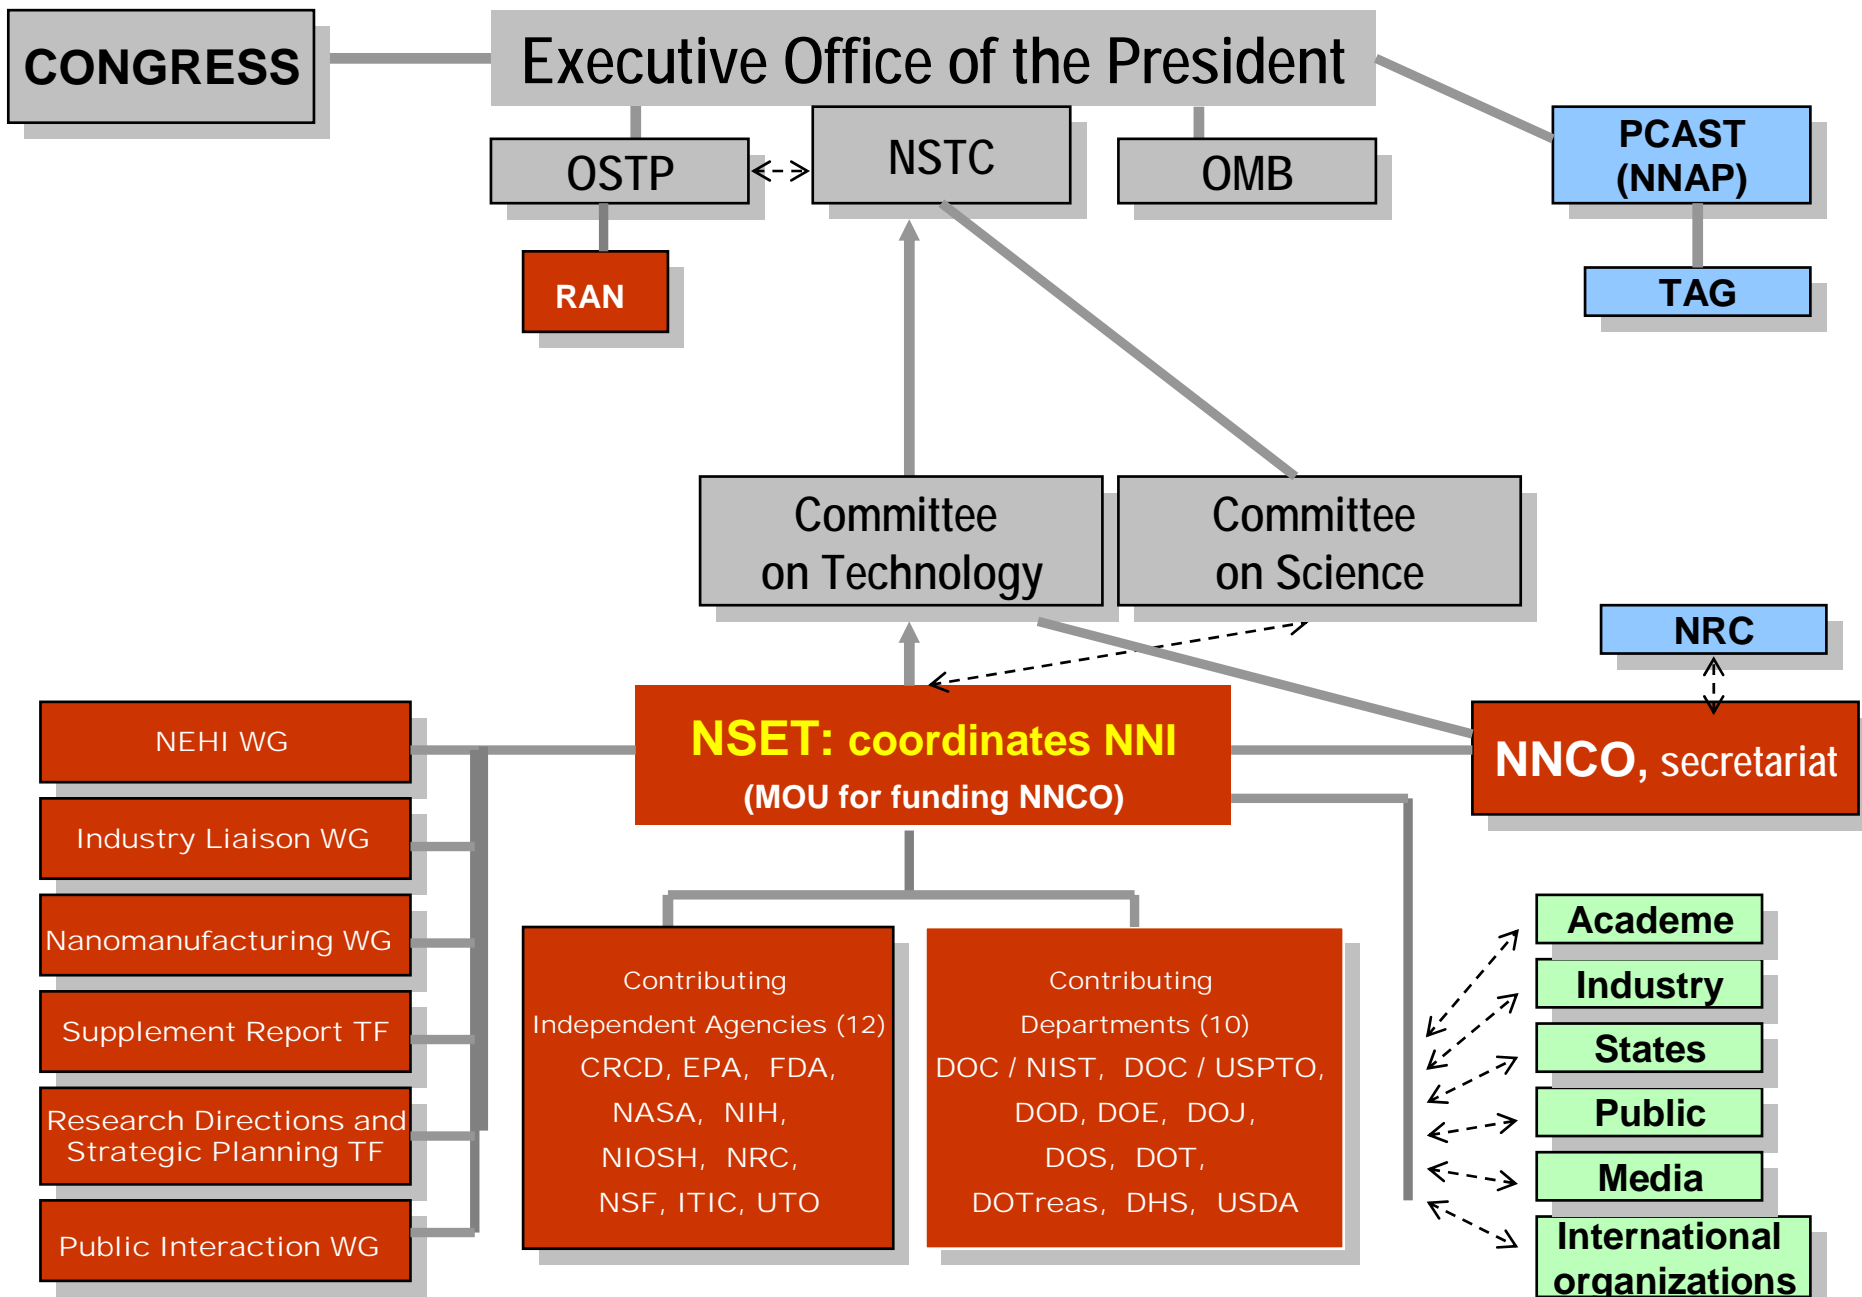

2001-2005: Elements of NNI

- **Fundamental Research**
Provides sustained support to individual investigators and small groups doing fundamental, innovative research
- **Grand Challenges**
for research on major, long-term objectives
- **Centers and Networks of Excellence**
for interdisciplinary research, networking, industry partnerships
- **Research Infrastructure**
metrology, instrumentation, modeling/simulation, user facilities
- **Societal Implications and Workforce Education and Training**
for a new generation of skilled workers; the impact of nanotechnology on society: legal, ethical, social, economic
(* these budgets do not include education and training through research grants)

NSET Mission

- The CT/NSET Subcommittee mission:
 - Coordinates, plans, and implements the National Nanotechnology Initiative (about \$1B/year)
 - Promotes a balanced investment across all agencies to address the critical elements supporting nanotechnology development
 - Promotes interagency coordination and collaboration
 - Exchanges information with academia, industry, States, & other
 - Requirements of the 21st Century Nanotechnology R&D Act (Public Law 108-153)
- To accomplish the vision - Working Groups (WGs) in key areas:
 - Nanotechnology Environmental and Health Implications
 - Industry Liaison
 - Nanomanufacturing
 - Public Interactions

Organization chart of the NNI

Grey: supervising organizations; Red: organizations implementing NNI; Blue: organizations evaluating NNI; Dash lines: informational links

Accomplishments (1)

- Developed foundational knowledge for control of matter at the nanoscale: over 2500 active projects in > 500 universities, private sector institutions and gov. labs in all 50 states
- “Created an interdisciplinary nanotechnology community”¹
- R&D / Innovation Results: With ~25% of global gov. investments, the U.S. accounts for
 - ~ 50% of highly cited papers,
 - ~ 60% of USPTO patents², and
 - ~ 60-70% of startups³ in nanotechnology worldwide.
- Infrastructure:
about 6,300 users in 2 academic-based networks

(¹) NSF Committee of Visitors, 2004; (²) Journal of Nanoparticle Research, 2004; (³) NanoBusiness Alliance, 2004

Accomplishments (2)

- Partnerships: with industry (Consultative Boards for Advancing Nanotechnology), regional alliances in U.S. (22), international (over 25 countries), professional societies
- Societal implications and applications -
from the beginning, about 10% of 2004 NNI
- Nanotechnology education and outreach -
impacting 10,000 graduate students and teachers (2004);
expanded to undergraduate and high schools, and outreach;
from 5 universities (2000) to about 300 (2004);
create national networks for formal and informal education.
The U.S. NNI has catalyzed global activities in nanotechnology
and served as a model for other programs.

Example:

Synthesis and control of nanomachines

(examples NSE in 2004, www.nseresearch.org - 300 projects)

- ❑ **Self-assembly processing** of nanoscale bio-materials and devices for micromachines components (UCSB)
- ❑ Chemistry to synthesize components of **nano machines to work on surfaces** and be activated by external electromagnetic fields (UCB)
- ❑ **Light driven molecular motors** (U. Nevada)
- ❑ **Combinatorial engineering of nanomachines** with application to membranes and filters (U. Penn.)
- ❑ **Nanoengineering surfaces** for probing viral adhesion (UC Davis)

Energy: Schematic design of the nanorod-polymer solar cell

transmission electron micrograph
of a CdSe nanorod at the bottom

Nanoscale drug delivery

Abraxane™ – (nab) paclitaxel

Overcoming biological barriers

- Injectable nanoparticle albumin-bound (nab) paclitaxel, a well-known chemotherapy agent
- Protein delivery system leverages albumin (common nutrient carrier) to deliver paclitaxel intravenously without toxic solvent normally required with paclitaxel alone
- Tumor cells readily accept albumin, anticipating the nutrients it normally ferries through the blood, and instead take up paclitaxel, which is toxic to the tumor cell

Clinical trials

- Randomized comparative study of 460 advanced breast cancer patients treated with Abraxane or paclitaxel
- Results: 29% reduction in risk of death in patients receiving Abraxane as a second line therapy
- FDA approved January 2005 for the treatment of advanced breast cancer after failure of first line chemotherapy

Angstrom Medica's nanostructured calcium phosphate technology for bone-based orthopedic implants

NanOss™ Calcium Phosphate Nanocrystals

*Composition and morphology of bone
Enhanced bioactivity and strength*

Bone bonding in 2 weeks and
osseointegration in 4 weeks
because the nanostructure closely
match that found in human bone

Angstrom Medica received SBIR in 2003 (NSF-0232733) and 2004 (NSF-0349884)

The product received "marketing clearance" from FDA in 2005

Exponential growth; About half of the highly cited papers in key journals originate in U.S.

(“nano*” keyword search, after NNI Supplement Budget Report, 2006)

ISI Web of Science Database
with 5400 professional journals

- U.S. about 30% for all journal articles in 2004

- U.S. about 50% in high-impact articles (UCLA NanoBank)
Ex: recent survey on Nature, Science, and Physics Review Letters

US has about 61% of world NT Patents (USPTO database)

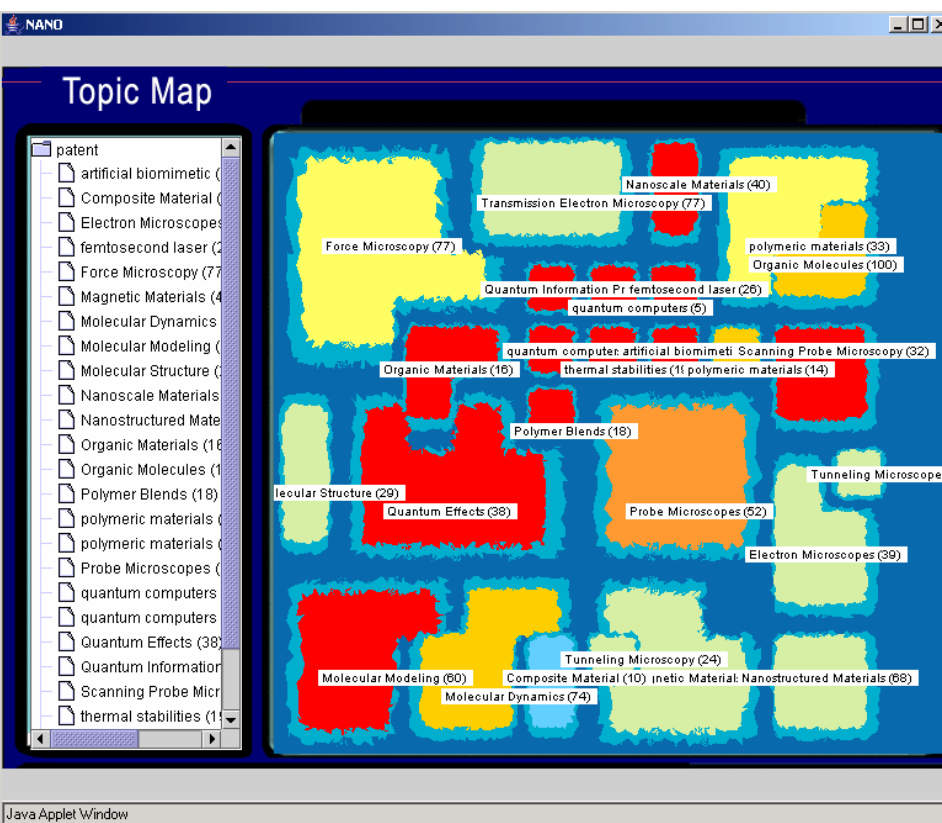

using “Title-claims” and “Full-text” search for nanotechnology by keywords
(using intelligent search engine, after J. Nanoparticle Research, 2004, Vol. 6, Issue 4)

Using “Title-claims” search: nanotechnology claims

Objectives for nanotechnology education

- Fundamental understanding from the nanoscale:
moving the foundation of learning from “microscale” to “nanoscale”
- Sharing similar concepts in various disciplines and relevance areas:
unifying concepts earlier in education
- **“Reversing the pyramid of learning”**: learning first unifying concepts of matter/ biology/ information systems, and then averaging techniques specific to each discipline
- **Combine “depth” with “breadth”**
- **Broader accessibility and motivation to S&T**
- **Engineering has an increased role** because of its interdisciplinary, integrative, system approach and transforming characteristics. Nanotechnology deals with systems.

Introducing earlier nanotechnology education (NSF: Nanoscale Science and Engineering Education)

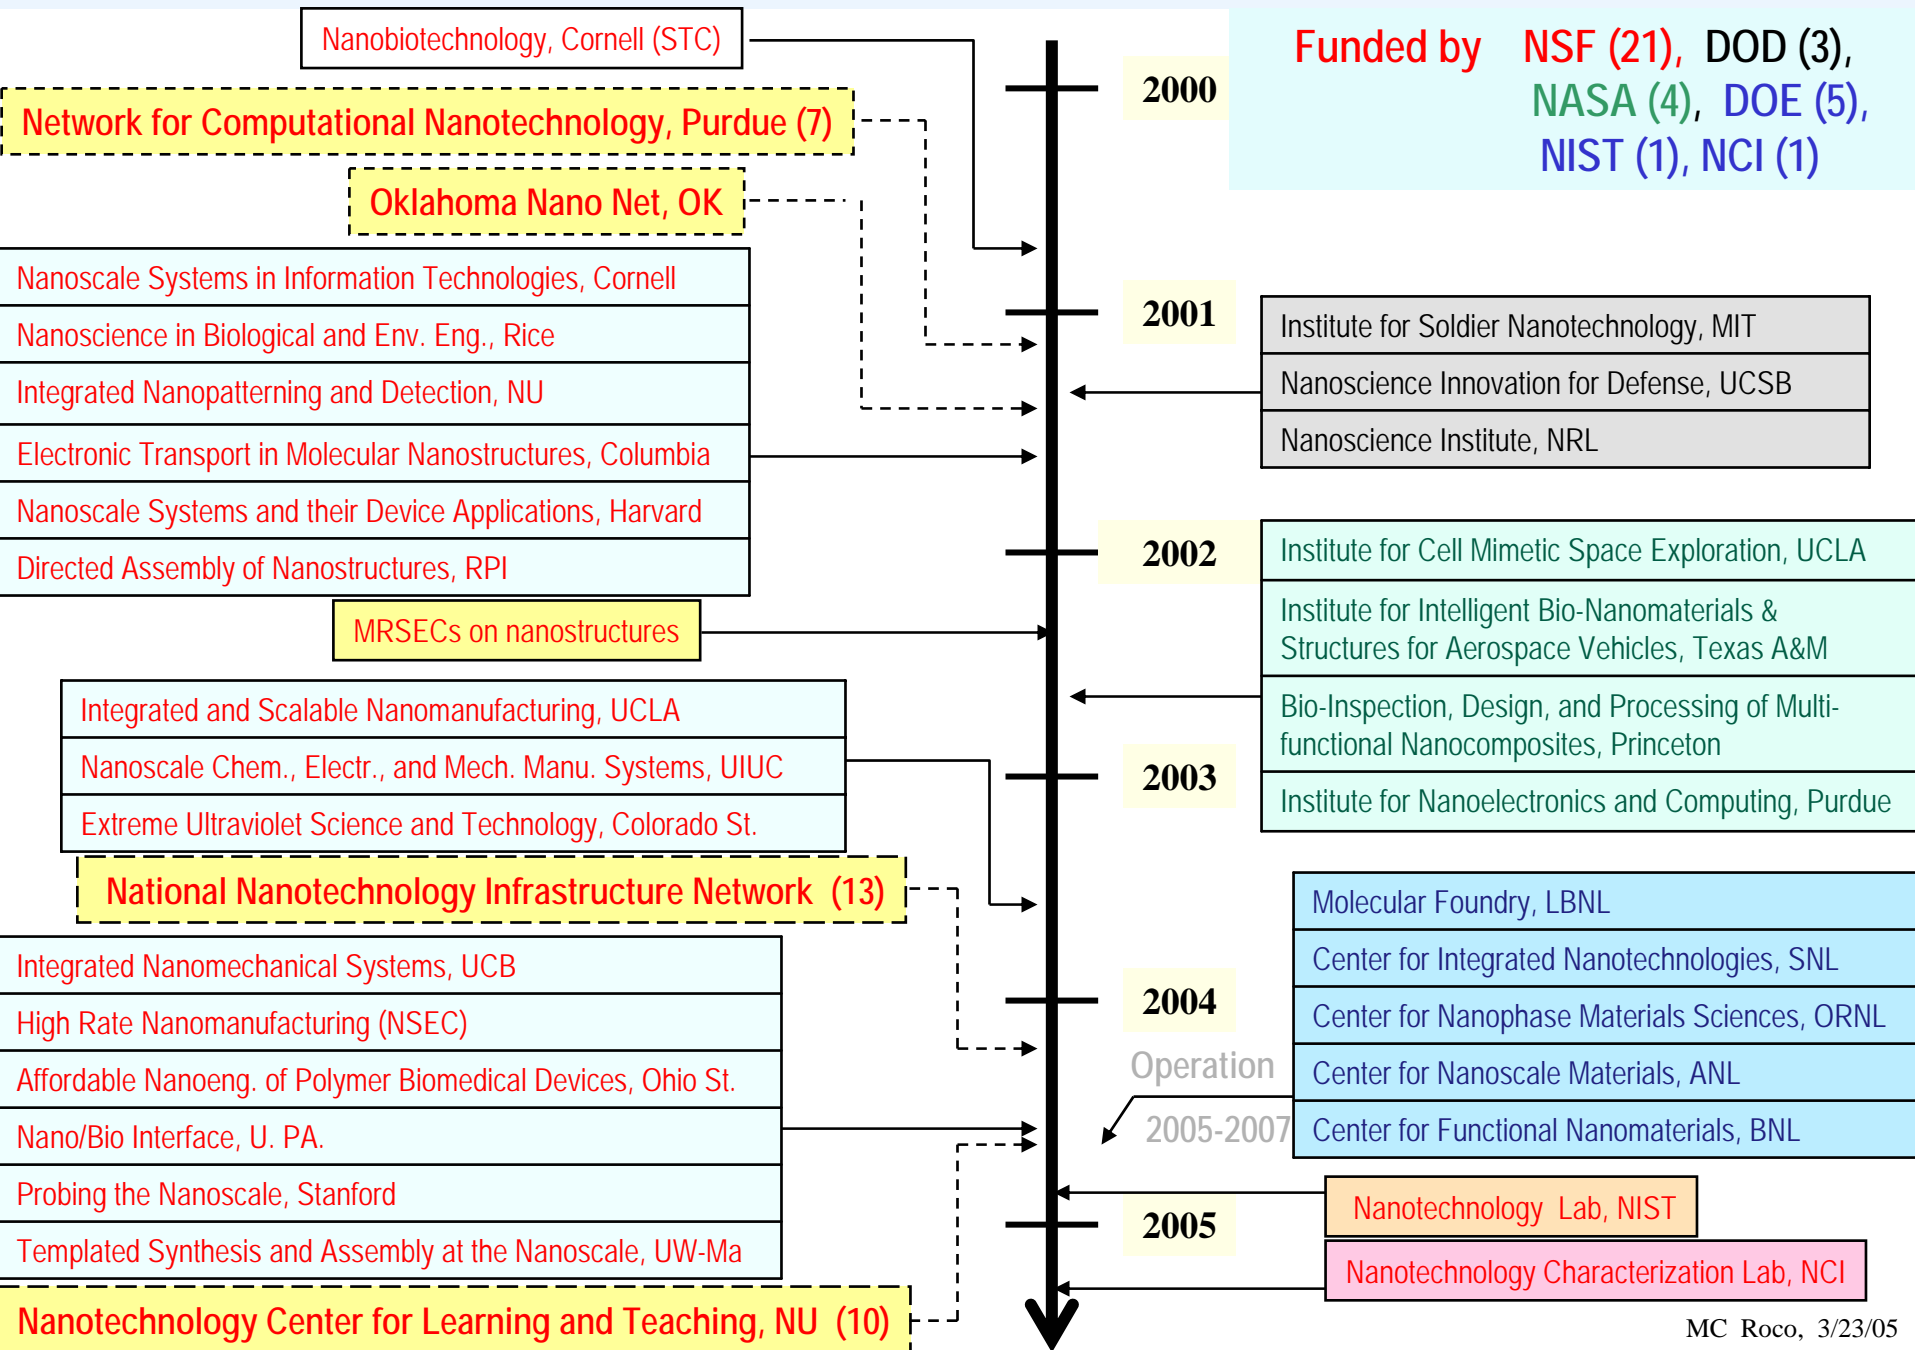

Nanotechnology education: What to do in the future?

- **Developing coherent, longitudinal program** with proper bridges between K-12, UG, G, postdoctoral, and continuing education, and encouraging earlier nanotechnology education
- **Targeting systemic changes K-16**
- **Priority to unifying S&E and broad relevance courses**
- **Partnering** for cross-disciplinarity, cross-relevance, and sharing resources (such as facilities and expertise, remote)
- **Enabling the teachers**
 - Training activities periodical available (ex: RET, at centers)
 - Create educational materials (modules, hand-on-kits, course notes)
 - Access to experimental facilities and specialized museums
- **International education opportunities** Young researchers to Japan and EU; PASI - Latin America, NSF-E.C.

Spring '04

Center for Integrated Nanotechnologies
at Sandia National Laboratories and
Los Alamos National Laboratory

Center for Integrated Nanotechnologies

NSET: Support Transition of Fundamental Discoveries into Innovative Technology

- **Grand challenges (2001-2005) for technology base**
Ex: nanomanufacturing – new NSF program \$22M in FY 02-,
2 centers established in FY 03, 1 in FY04, 1 in FY 05
- **Infrastructure for instrumentation, tools, laboratories**
Ex.: 33 centers and networks by 5 agencies; NSF/DMR
instrumentation program, NNIN, NIST metrology and standards
- **Prepare the workforce at all levels**
Ex: Technological, Community Colleges and UE in PA (PFI award)
- **Various mechanisms for interaction with industry**
Ex.: Fund collaborations with industrial partners (GOALI, centers);
Provide the NNI results to industry; Provide user facilities;
Assistance for instrumentation, standards, manufacturing;
Direct technology transfer and funding industrial projects:
SBIR/STTR all agencies

SBIR/STTR funding FY 2003-2004 (estimation)

	2001		2002		2003	
	Total Funding	Total Projects	Total Funding	Total Projects	Total Funding	Total Projects
DOD	20.9	104	32.2	157	32.2	144
DOE	4.5	34	1.0	2	5.8	30
NASA	5.5	31	12.8	48	2.4	28
HHS (NIH)	6.4	32	8.1	19	14.1	43
NSF	9.4	51	8.1	62	14.0	84
DOT	0.3	2	0	0	N/A	N/A
EPA	0.3	4	0.3	4	0.5	6
USDA	0.1	1	0.5	4	0	0
DOC	0.1	1	0.5	4	0.2	3
Totals	47.5	260	63.5	300	69.2	338

Funding - in million \$

About 7% of the NNI R&D budget in FY 2003

About 3.5% of funding for all SBIR/STTR topics, all agencies

Planning for the future: expanding the frontiers of nanotechnology

Workshops for receiving input from the community (examples):

- Nanostructured materials "by design" - Workshops on 10/02, 06/03
- Catalysts that function at the nanoscale - Workshop on 06/03
- Nanoelectronics, optoelectronics and magnetics - Workshops 11/02, Fall 03
- CBRE protection and detection (revised in 2002) - Workshop 05/02
- Advanced healthcare, therapeutics, diagnostics - Workshops 06/00
- Nano-biology and medicine – Workshop Fall 03
- Environmental improvement - Workshops 06/02, 08/02, Spring 03
- Efficient energy conversion and storage - Workshops 10/02, 01/03
- Microcraft space exploration and industrialization - Workshop Fall 03
- Manufacturing processes - Workshops 01/02, 05/02
- Agriculture and food systems – Workshop 11/02
- Societal implications (II) - Workshop 12/03

Dec. 2004: Update 10 year vision, and develop strategic plan

See Appendix C. List of NNI reports since 2001

Second NNI strategic plan (2006-2010): Goals / Activities

Four main goals (including areas of new focus for next 5 years)

- **Maintain a world-class research and development program aimed at realizing the full potential of nanotechnology**
(Support R&D for active nanostructures and nanosystems)
- **Facilitate transfer of the new technologies into products for commercial and public benefit** *(Increase funding for technological innovation and multidisciplinary R&D platforms)*
- **Develop educational resources, a skilled workforce, and the supporting infrastructure and tools needed to advance nanotechnology**
(Access to research facilities and educational opportunities in nanoscale science and engineering for half of the undergraduate and graduate students by 2010)
- **Support responsible development of nanotechnology thru societal, environmental and health implications R&D, and interaction with the public**
(Address sustainability and life cycle of products)

Requested FY 2006 NNI Investment by Program Component Areas - each with specific research targets

2006 Planned Agency Investments by Program Component Area (in \$ millions)								
	Fundamental Nanoscale Phenomena and Processes	Nano-materials	Nanoscale Devices and Systems	Instrumentation Research, Metrology, and Standards for Nanotechnology	Nano-manufacturing	Major Research Facilities and Instrumentation Acquisition	Societal Dimensions	NNI Total ⁺⁺
NSF	95	75	54	12	24	24	60	344
DOD	35	83	99	3	2	6	2	230
DOE	48	33	5	11	0	109	1	207

EPA	> 0.5	0	> 0.5	0	0	0	4	5
HHS (NIOSH)	0	0	0	0	0	0	3	3
DOJ	0	0	0	0	0	0	2	2
DHS	0	0	1	0	0	0	0	1
TOTAL	234	228	244	71	47	148	82	1054

See Appendix A. Goals and activities of key NNI agencies

After 3 years of NNI: New R&D potential targets for 2015 (ex.)

2004

2015

Nanoscale visualization and simulation of 3D/m domains

= Micro domains with nano space and time resolutions

Transistor beyond/integrated CMOS under 10 nm

New catalysts for chemical manufacturing

No suffering and death from cancer when treated

Control of nanoparticles in air, soils and waters

After 3 years of NNI:
New R&D potential targets for 2015 ⁽²⁾

2004

2015

Advanced materials and manu.: $\frac{1}{2}$ from molecular level

Pharmaceuticals synthesis and delivery: $\frac{1}{2}$ based on nano

Converging technologies from the nanoscale

Including: artificial organs, manufacturing multidisciplinary platforms, etc.

Life-cycle biocompatible/sustainable development

Education: nanoscale instead of microscale-based

Challenge 2015: Transistor beyond/integrated CMOS under 10 nm

- In the 70s, 80s and 90s
Geometrical scaling was the major driver
- In the 2003 - 2012 period (industry target)
Use of novel physical phenomena to extend performance by equivalent scaling are the major drivers. Examples (2004):

1.2 nm gate oxide is ~5
Silicon atom layers thick

**"Strained Silicon" -
Separating the Silicon Atoms
for Faster Electron Flow**

Tri-gate Transistor

In addition, to explore beyond CMOS:

- New carriers instead of electron charge
- Integrate CMOS with other nanodevices
- New system architectures
- Integration with applications

Challenge 2015: To simulate engineering problems from basic principles at the nanoscale

Using nanotechnology to build the highest speed processors

Capability 2004 (Cray X1):
50+ TFLOPS (fastest computer in the world)

~ 2010 (Cray Cascade):
DARPA – NSF – DOE acad. support
1,000+ TFLOPS

~ 2015 (Cray target):
10-100,000 TFLOPS

Using fast computers and reconfigurable computing for nanoscale S&E
“application acceleration”
(for 100x potential speedup)

Challenge 2015: Specify the state of a cell and of nervous system from the nanoscale

The Cell

– basic nanosystem of life

Measure and simulate, 3 dimensional, highly parallel, . . .

R. Llinas, 2003

The brain

– complex system based on nanoscale processes

Challenge 2015: To Eliminate Suffering and Death Due to Cancer

“A Vision Not a Dream!” by using nanotechnology, A v. Eschenbach, NCI

Where We Want To Be ← Where We Are

Cancer results from accumulation of multiple genetic changes in a cells.
Nanotechnology will allow earlier detection and prevention (Year 0)

Examples of levels for intervention of nanobiotechnology *in human life extension*

Human

Organ

Cell

Molecule

- Artificial organs
- Sensors for in vivo monitoring
- Localized drug delivery
- Neural stimulation
- Cardiac therapies

- Improved cell-material interactions
- Scaffolds for tissue eng.
- Genetic therapies
- Cell ageing
- Stem cell therapies

- Localized drug delivery
- Gene therapy devices
- Self-assembly structures
- Fast diagnostic techniques

- Joint replacement
- Non-invasive and invasive diagnostics for rapid patient monitoring
- Cognitive-assist devices
- Targeted cancer therapies

NNI agencies and collaborations

- NSET:
 - Coordination in R&D planning
 - R&D investment (ex: fund complementary fields of research that are critical for the advancement of the nanotechnology)
 - Develop a balanced infrastructure (ex: portfolio of programs, development of new specific tools, instrumentation, simulation infrastructure, standards for nanoscale)
 - Correlate funding activities for centers and networks of excellence; cost-share high cost R&D activities; develop a broad workforce trained in the many aspects necessary to nanotechnology
 - Address related aspects of EHS issues
 - Avoid unnecessary duplication of efforts; others.
- The coordination also will address NNI management issues, interaction with nanotechnology regional alliances, and international activities. NNCO - office of NSET for this purpose, and several NSET working groups provide support for partnerships.

NNI agencies and collaborations

- Illustrations for FY 2006 -

- **Nanomanufacturing (main partners NSF, DOD and NIST)**

NSF's Center for Hierarchical Nanomanufacturing will become fully operational in 2006, as will the complementary DOD MURI, and the NIST N³F. NSET will also coordinate its activities in this area with the NSTC Interagency Working Group on Manufacturing Research and Development.

- **Environmental, Health, and Safety (EHS) Research**

EPA, NSF, NIOSH, and USDA plan an expanded joint extramural research program The National Toxicology Program's initiative; NIOSH's "recommended practices" for safe handling of nanomaterials; NEHI monthly meetings

- **Industry Liaison in Support of Technology Transfer and Commercialization**

The NSET Subcommittee will expand its activities to reach out to U.S. industry NSF's "Silicon Nanoelectronics and Beyond" activity DOD will place a new emphasis in 2006 on moving research innovations into applications in support of the DOD mission. NSET's informal working group on industry liaison will help to coordinate this interagency thrust.

- **Standards Development**

Partner: American National Standards Institute's Nanotechnology Standards Panel (ANSI-NSP)

- **Infrastructure Development**

Among R&D centers (NSECs, NNIN and NCN, centers and network with DOD, NASA and DOE); Modeling and simulation and nanoelectronics (DOD, NASA and NSF).

Industry surveys: First Generation of products

Companies working in nanotechnology (Small Times Media)

In U.S., March 2005: 1455 nanotech companies
23,000 new jobs in small startup 'nano' companies

- All Fortune 500 companies in emerging materials /electr. /pharma
- 19 of the 30 Dow Jones companies have launched nano initiatives

Industry surveys

- Timeline for commercialization (<http://nano.nccms.org>)

Survey by National Center for Manufacturing Sciences (2005):

600 manufacturing companies: 83% expect products in < 5 years

NNI-Industry Consultative Boards for Advancing Nanotech (1)

Key for development of nanotechnology, Reciprocal gains

☐ **NNI-Electronic Industry (SRC lead), 10/2003 -**

Collaborative activities in key R&D areas
5 working groups, Periodical joint actions and reports
NSF-SRC agreement for joint funding; other joint funding

☐ **NNI-Chemical Industry (CCR lead)**

Joint road map for nanomaterials R&D; Report in 2004
2 working groups, including on EHS
Use of NNI R&D results, and identify R&D opportunities

☐ **NNI – Organizations and business (IRI lead)**

Joint activities in R&D technology management
2 working groups (nanotech in industry, EHS)
Exchange information, use NNI results, support new topics

☐ **NNI-Biotechnology (BIO lead), 10/2004-**

Collaborative activities in key R&D areas
2 working groups, R&D collaboration and EHS; joint funding

NNI-Industry Consultative Boards for Advancing Nanotech (2)

Key for development of nanotechnology, Reciprocal gains

In development

❑ **NNI - Pharmaceuticals (Pharma lead), 4/2004-**

Joint road map for nanomaterials R&D

2 working groups, including on EHS

Use of NNI R&D results, and identify R&D opportunities

❑ **NNI – Forestry and paper products (FS lead), 10/2004-**

Workshop / roadmap for R&D

2 working groups (nanotech in industry, EHS)

Exchange information, use NNI results, support new topics

❑ **NNI - Automotive Industry, 3/2005-**

Other contacts: industry sectors such as aeronautics, plastics, food products, energy-related

Sampling of Current Regional, State, & Local Initiatives in Nanotechnology

Societal Implications: Follow-up of the September 2000 report

- Make support for social, ethical, and economic research studies a priority:
 - (a) New theme in the NSF program solicitations;
 - (b) Centers with societal implications programs;
 - (c) Initiative on the impact of technology, NBIC, HSD
- NNCO – communicate with the public and address Environmental, Health and Safety issues, and unexpected consequences
- NSET's Nanostructures Environmental and Health Issues working group has been established in 8/2003, 12 agencies
- Workshop with EC (2001); Links to Europe, Americas, Asia; International Dialogue (26 countries, NSF-sponsored)

Societal Implications of Nanoscience and Nanotechnology

Edited by
Mihail C. Roco and William Sims Bainbridge

Kluwer Academic Publishers

<http://nano.gov>

Key issues in long term

- Respect human right to: access to knowledge and welfare; human integrity, dignity, health and safety
- Balanced and equitable R&D nanotechnology investment
- Environment protection and improvement (water, air, soil)
Sustainable development, life-cycle of products, global effects (weather), eliminate pollution at the source
- Economic, legal, ethical, moral, regulatory, social and international (developed-developing countries) aspects
Interacting with the public and organizations
- Adaptive/corrective approach for a complex system

Immediate and continuing issues:

- *EHS in research laboratories and industrial units*
- *Harmonizing nomenclatures, norms and standards*
- *Primary data and methodology for risk analysis*

NNI activities

for Environmental, Health and other Societal Implications

- A. Align R&D investment with societal implications*
- B. Evaluate and implement regulatory standards*
- C. Coordinated measures for EHS and ELES*
- D. Periodical meeting for grantees,
setting research targets, and
interaction with industry and the public*
- E. International collaboration (International Dialog
for Responsible R&D of Nanotechnology)*

A. NNI coordination for R&D investments

- **NSF** research grants on environmental and societal implications
All basic R&D areas, transport of nanoparticles; Programs since 2000
- **NIH** research on effects of nanoscale materials in the body
- **EPA** research grants on environmental implications of manufactured nanomaterials
- **National Toxicology Program (NIEHS, NCTR, NIOSH)**
Project to study toxicity of nanotubes, quantum dots, and titanium dioxide
- **NIST** development of standards and measurements for nanoscale particles
- **FDA and USPTO** training and specialized activities
- **USDA and DOE** support fate and transport studies
- **DOD** supports exposure studies
- **Solicitations (SI):** NSF (ENV, SI), EPA-NSF-NIOSH, USDA, NIH

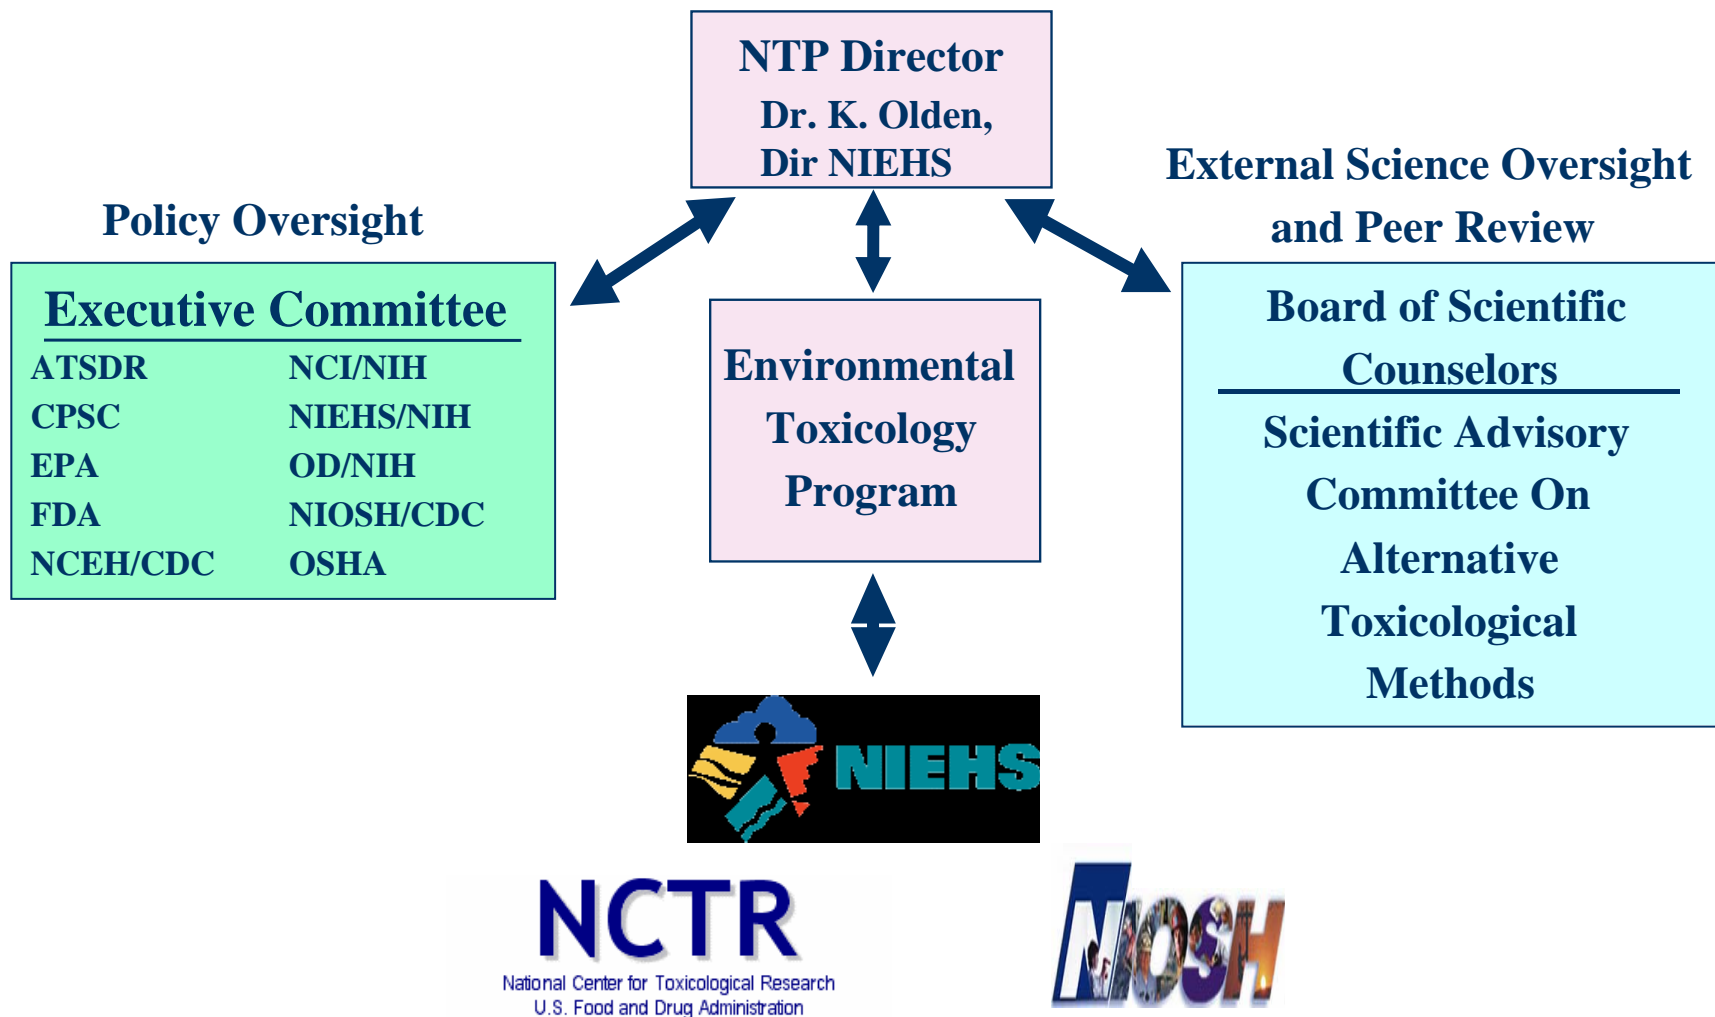

NSF **environmental centers** and interdisciplinary groups with research and education at the nanoscale

Center (details on www.nsf.gov/home/crssprgm/nano/nni01_03_env.htm)	Institution
Fundamental Studies of Nanoparticles Formation in Air Pollution	Worcester Polytechnic Institute (\$2.7M)
Center for Advanced Materials for Water Purification	University of Illinois at Urbana (\$20.1M)
Center for Environmentally Responsible Solvents and Processes	University of North Carolina at Chapel Hill (\$25.0M)
Nanoscience in Biological and Environmental Engineering (estimated 50% in environment)	Rice University (\$11.8M)
Environmental Molecular Science Institute	Univ. of Notre Dame (\$5M)
NIRT: Investigating Nano-carbon Particles in the Atmosphere: Formation and Transformation	University of Utah (\$1.7M)
NIRT: Nanoscale Processes in the Environment - Atmospheric Nanoparticles	Harvard University (\$1.6M)
Center for Advanced Computational Environment	SUNY Buffalo (\$5.5M)
NIRT: Nanoscale Sensing Device for Measuring the Supply of Iron to Phytoplankton in Marine Systems	University of Maine (\$0.9M)

NNI projects supporting **toxicity research** (examples)

Project	Agency, Institution
National Toxicology Program (\$0.5M in FY 2004 to \$5M in FY 2008)	NIH/NIEHS, FDA/NCTR, NIOSH
Particle characterization for health and safety (\$1.7M in FY 2004 rto \$2.3M in FY 2005)	NIOSH
Nanotechnology Characterization Laboratory (\$5M/yr, part of \$144M/yr NCI for FYs 2004-2008)	National Cancer Institute
Multidisciplinary University Research on Nanoparticle Toxicity	Department of Defense supported center
Molecular function at the Nano-Bio Interface (component on nanostructures and cell behavior)	NSF/NSEC U. Pennsylvania
Nanomanufacturing Center for Enabling Tools (component on safe manufacturing)	NSF/NSEC Northeastern University
Size Dependent Neural Translocation of Nanoparticles	NSF/SGER, Rochester University
Reverse Engineering Cellular Pathways from Human Cells Exposed to Nanomaterials	NSF/SGER

National Toxicology Program organization

Nanotechnology Characterization Laboratory (NCI) Concept of Operations

For comparison and characterization of nanomaterials intended for cancer detection, diagnostics, and therapeutics in humans.

Sources of Nanomaterials

Cancer Centers of Nanotech Excellence (CCNEs)

Academia

NNI

Small Business

NCI, NIH, NSF

DoD, DoE

Unconventional Innovative Program (UIP)

Detection

Diagnostics

Therapeutics

Candidate
Nanoparticles

NNI projects supporting **social implications** (examples (1))

Project	Agency, Institution
Nanotechnology and its Publics	NSF, Pennsylvania St. U.
Public Information, and Deliberation in Nanoscience and Nanotechnology Policy (SGER)	Interagency, North Carolina St. U.
Social and Ethical Research and Education in Agrifood Nanotechnology (NIRT)	NSF, Michigan St. U.
From Laboratory to Society: Developing an Informed Approach to NSE (NIRT)	NSF, U. of South Carolina
Social and ethical dimensions of nanotechnology	NSF, U. Of Virginia
Ethics and belief inside the development of nanotechnology (CAREER)	NSF, U. Of Virginia
All centers, NNIN and NCN have a societal implications components	NSF, DOE, DOD and NIH All nano centers and networks

NNI projects supporting **social implications** (examples (2))

Project	Agency, Institution
Citizen Learning, Deliberation, and Reasoning in Internet-Mediated Technology Policy Forums	NSF, North Carolina State University
Public Information, and Deliberation in Nanoscience and Nanotechnology Policy (SGER)	Interagency, North Carolina State University
An Integrated Approach to Teaching Nanotechnology and Society (NUE)	University of Wisconsin
Nanotechnology: Content and Context (NUE)	Rice University
Undergraduate Exploration of Nanoscience, Applications and Societal Implications (NUE)	NSF, Michigan Technological U.
Assessing the Implications of Emerging Technologies (IGERT)	NSF, MIT
Nanoparticle Science and Engineering (IGERT)	NSF, University of Minnesota

Four NSF centers with national outreach fully or partially dedicated to societal dimensions

- **Center for Nanotechnology in Society
(2005 -)**
- **Nanotechnology Center Learning and Teaching
(2004 -)**
- **Center for Nanotechnology Informal Science Education
(2005 -)**
- **Center for Hierarchical Nanomanufacturing
(2005 -)**

B. Regulatory and Research Topics for EHS

Modified after schematic
Mark Alper, LBNL

C. Current NNI coordinated measures for EHS

- Develop statement on “Best practices” for research laboratories and industry units (NIOSH, NSF, DOE, NASA, DOD), and identify gaps
- Map of EHS responsibilities and contacts in each NNI agency
- Establish response approach to an unexpected event or an emergency
- Identify protective equipment suitable for nanoparticles and other nanostructured materials (OSHA, NIOSH, other agencies)
- Support development of instrumentation and metrology (NSF, NIST)
- Develop a unified, explicit nomenclature (agencies, ANSI)
- Develop standards for nanotechnology (NIST, ANSI, IEEE, ASME)
- Collaborative activities with industry (SRC, CCR, Phrma, IRI)
- Identify research and educational needs (Fundamental, GCs)

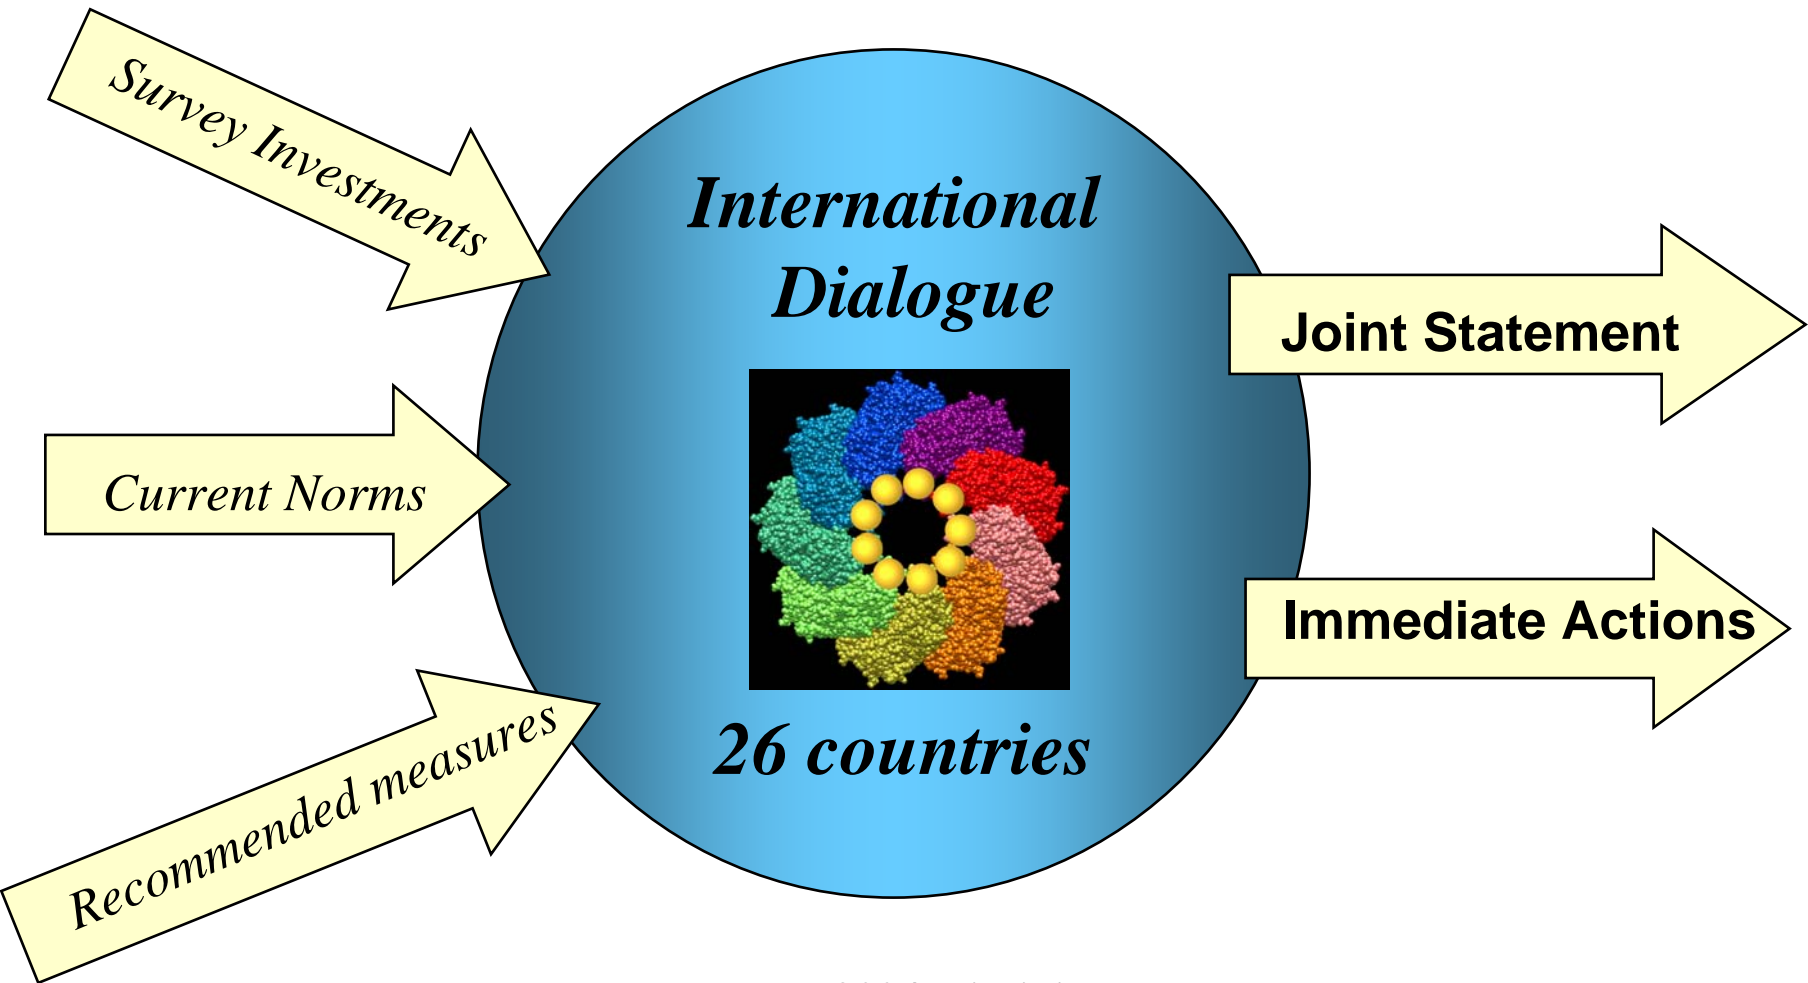

NSET Group: “Nanomaterials Environmental and Health Implications”

OSTP Group: “Risk Assessment of Nanotechnology” task force

D. NNI workshops on nano-environmental research examples

- NSF, 9/2000: "Societal Implications of Nanoscience and Nanotechnology"
- NSF, 6/2002: "Nanoparticles and the environment"
(grantees meeting, book)
- EPA, 11/2003: "Nanotechnology and the environment applications and implications" (grantees meeting, brochure)
- ACS, 3/2003: "Symposium on nanotechnology implications in the environment", New Orleans
- NNI, 5/2003: "Vision for environmental implications and improvement"
(interagency, report)
- NSET/NNCO, 8/2003: Review of Federal Regulations (report)
- NNI, 9/2003: Interagency : grantees meeting (report);
- Wilson Center, 10/2003: EPA and FDA regulatory functions (report)
- NSET, 12/03 "Societal Implications of Nanoscience and Nanotechnology (II)"

E. International Dialogue on Responsible Nanotechnology R&D

June 2004, Virginia

<http://www.nsf.gov/home/crssprgm/nano/dialog.htm>

International Dialogue on Responsible Nanotechnology R&D

Activities after the June 2004 International Dialogue on Responsible Nanotechnology (Virginia, U.S.)

- October 2004/October 2005 - Occupational Safety Group
- November 2004 – OECD group on nanotechnology
- December 2004 – Meridian study for developing countries begins (next meeting in March 2005)
- December 2004 - International collaboration for nomenclature and standards has been initiated
- February 2005 – N-S Dialogue on Nanotechnology (UNIDO)
- May 2005 – Nano-world, MRS (Materials, Education)
- Spring 2005 – International Agreement? (host: EC)

NNI challenges

- **Coherent long-term (5-10 year) programs:** new priorities – how to handle budget constraints; support interdisciplinary research and education, flexible infrastructure, and broad societal implications; Nano-bio still in infancy
- **Horizontal versus vertical S&T development:** increasing technological innovation in the 2nd NNI Strategic Plan
- **More effective in including public, industry and states perspectives**
- **Collaboration and synergism among agencies;** Incentives for agency participation and proper reporting
- **Need for bold system-oriented programs,** particularly in mission-oriented agencies, focused on topics such as: the new catalyst, new transistor, conditioning the cell
- **International collaboration and competition**

Appendix A.

Agencies with major NNI investment

- NSF
- DOD
- DOE
- NIH
- NASA
- NIST
- EPA
- NIOSH
- USDA

NSF - a pioneer at the international level in Nanoscale Science and Engineering

FY 2005: ~ 1/4 of Federal and 1/12 of World Investment

- **Eight themes:** Biotechnology, Novel nanostructures and phenomena, Device and system architecture, Beyond CMOS, Environmental Processes, Multiscale modeling, Nanomanufacturing; Societal implications and Improving human performance
- **Establishing the infrastructure:** over 2,500 active projects; 20 large centers, 2 user facilities (NNIN, NCN), multidisciplinary teams
- **Training and education** - 10,000 students and teachers

Fiscal Year	NSF	Law 03
2000	\$97M	
2001	\$150M	
2002	\$199M	
2003	\$221M	
2004	\$254M	
C. Plan 2005	\$338M	\$384M

DOD STRATEGIC RESEARCH AREA NANOSCIENCE (NNI Plan)

DOD SCIENCE-DRIVEN OPPORTUNITIES WITH MAJOR IMPACT

- NANOELECTRONICS/PHOTONICS/MAGNETICS

Network Centric Warfare

Information Warfare

Uninhabited Combat Vehicles

Automation/Robotics for Reduced Manning

Effective training through virtual reality

Digital signal processing and LPI

- NANOMATERIALS “BY DESIGN”

High Performance, Affordable Materials

Multifunction, Adaptive (Smart) Materials

Energetic Materials/Power Sources

Nanoengineered Functional Materials (Metamaterials)

Reduced Maintenance - halt nanoscale failure initiation

- BIONANOTECHNOLOGY - WARFIGHTER PROTECTION

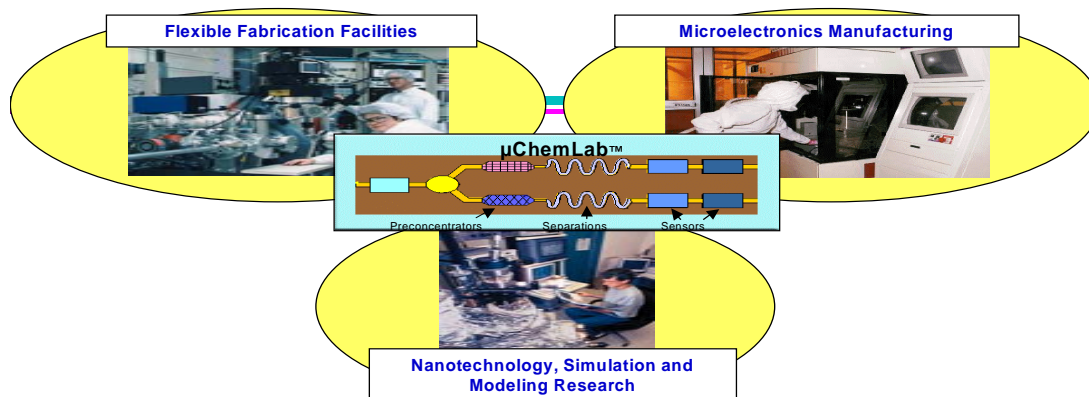

Chemical/Biological Agent detection/destruction

Human Performance/Health Monitor/Prophylaxis

DOE: Proposed Initiative Focus Areas (NNI Plan)

- **Fundamentals** for the study of the properties and behavior of nanostructures and nanostructured materials.
- **Grand Challenges** primarily for the study of novel materials and energy-related
- **DOE Nanoscale Science Research Centers (5) – large user facilities**
- **Research Infrastructure** primarily for increasing user support and instrumentation for nanotechnology at the BES user facilities.

**Nanotechnology integration
at the Sandia National Laboratories**

NIH: NANOTECHNOLOGY FOCUS AREAS (NNI Plan)

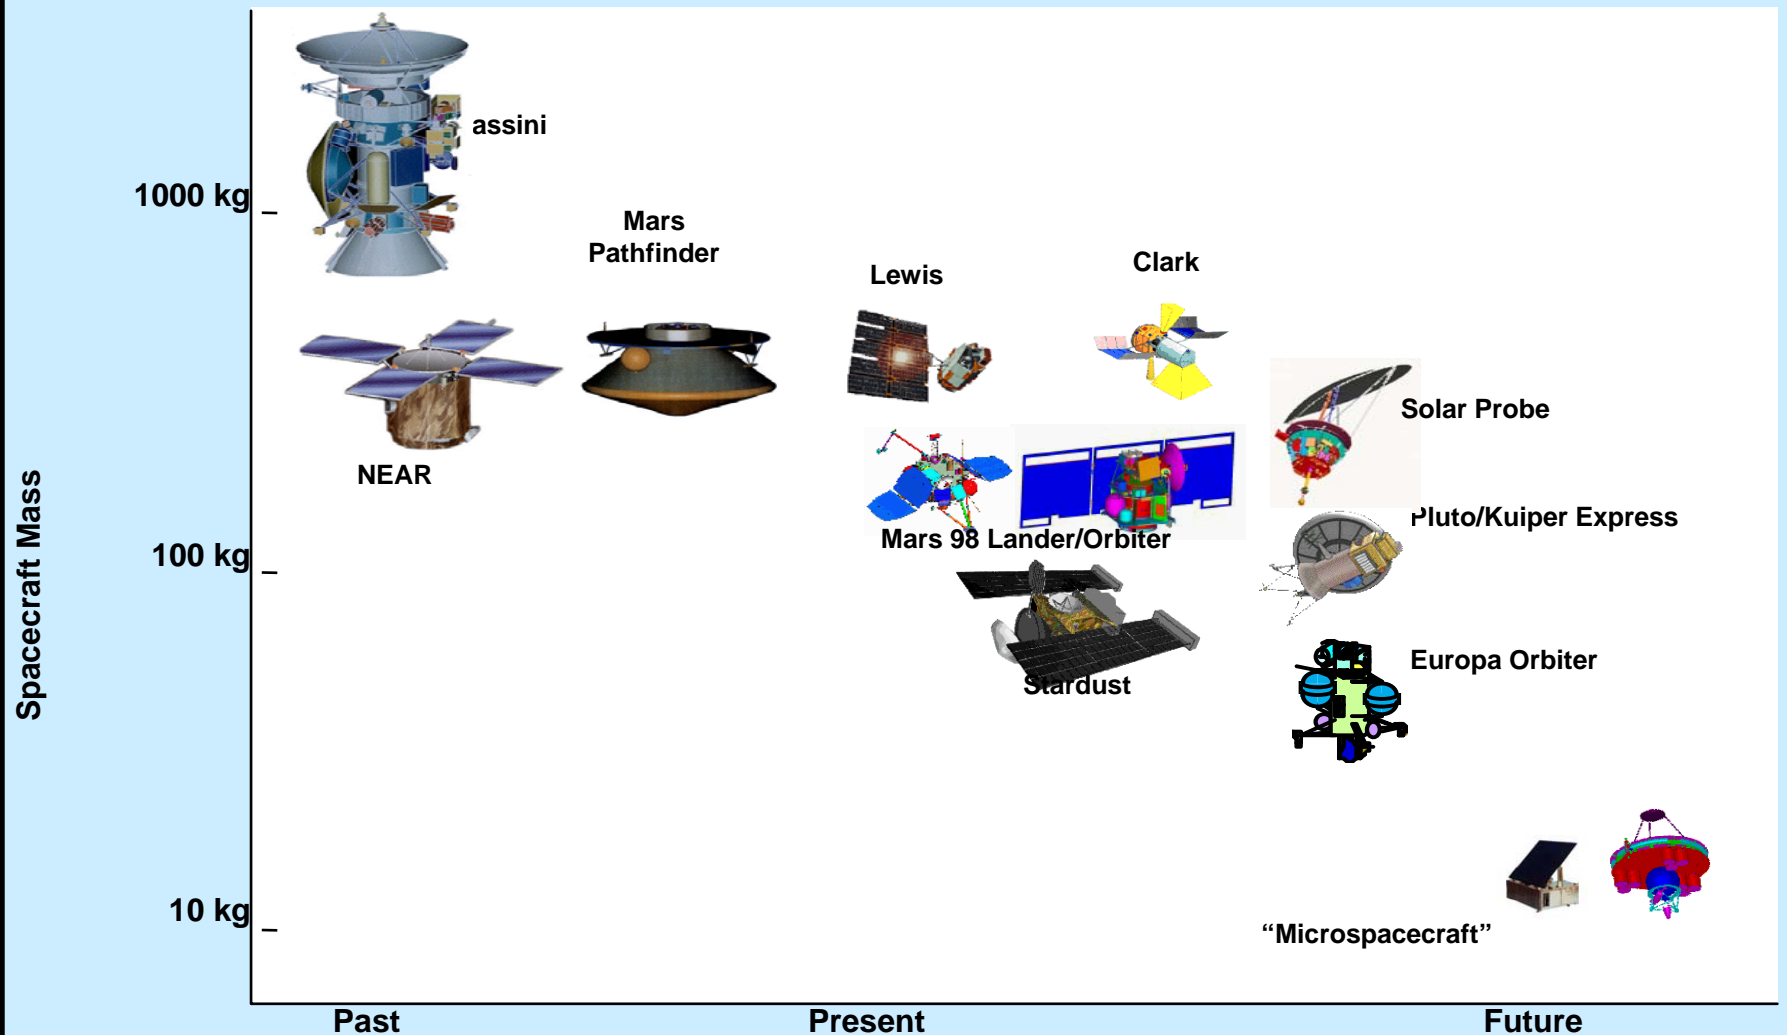

GOALS

- Early detection of disease: Imaging; Sensors
- Novel therapeutic delivery systems: New forms to expand the type of materials that can be used for targeted delivery
- Tissue repair and regeneration: Design materials that can interact with the biological environment
- Deep insight into biological systems: Understanding of the *design* of biological systems and processes.

IMPLEMENTATION

- Investigator-initiated grants
- Trans-NIH nanotechnology opportunities (e.g., BECON)
- NCI Nanotechnology Alliance
- NHLBI Centers
- NIEHS/NTP toxicology studies
- NIH Nanomedicine Roadmap

NASA: Progressive spacecraft miniaturization (NNI Plan)

NIST: Measurement and Technology Support (NNI Plan)

- Measurements
- Standards and metrology
- Evaluated Data

*Atomic scale
dimensional
standards*

- New Test and Measurement Methods
- Support to academic and industrial users

Environmental Protection Agency (NNI Plan)

Goals for R&D program:

- Build and sustain a community of researchers in nanotech and the environment-both applications and implications
- Institutionalize nanotech within EPA's mission
- Advance consideration of the environment and human health in government R&D
- Work with industry to assure environmentally responsible development
- Provide leadership in international activities related to EHS
- Provide education and outreach to the public to promote understanding of nanotechnology with respect to environment and human health.

Examples of the successes in nanotechnology and the environment are:

- Nanomaterials to clean up chlorinated organics and heavy metals
- Nano-improved sensors for detecting different bacterial species, algal toxins, heavy metals
- Nanocatalysts that improve air quality, treat wastes, enable more efficient manufacturing

The NIOSH Nanotechnology Initiative

Addressing the implications and applications of nanotechnology in the workplace

Toxicity
Health Effects
Exposure
Measurement
Control
Surveillance
Risk Assessment
Risk
Management

Government
Academia
Industry
Workers

Information
Education
Recommendations

Mission: To provide national and world leadership in preventing work-related illness and injury through the responsible development and use of nanotechnology

USDA

- Research nanoscale phenomena and processes with significant implications for improving biological production, processing, and preservation. Research sensing mechanisms useful to ensure food safety and biosecurity, improve environmental quality, enhance production and process efficiency, and promote human health through optimal food, and nutrition and diet.
- Major research areas are: (a) nanoscale biomaterials of agricultural origins for novel uses; (b) nanomaterials that can be used in sensing and detection for food safety and biosecurity, identity preservation and tracking, controlled delivery and release of functional contents; (c) novel biocatalysts; and (d) nanocomposite materials for various applications (e.g., improved barrier and mechanical properties of packaging materials).

Appendix B. NNI Activities in Education and Training

- **Integrated Research and Education - Make Every Lab a Place of Learning** (about 10,000 trained per year)
- **Curriculum development**
New courses, 10 IGERT, Nanotech Undergrad Education
- **Education and outreach programs**
from K-12 to G; includes NSEE; science museums
- **International education opportunities**
young researchers to Japan and Europe; REU sites; attend courses abroad; PASI - Latin America, NSF-E.C.; bi-lateral workshops and exchanges

Nanotechnology university education

- examples of activities -

- Nanotechnology curriculum development (G, UG)
- Integration of research and education
(ex: IGERT, CRCD, REU, RET)
- Local and long-distance outreach education (G, UG, K-12)
- Technological education
- Education and training in centers and networks
- Modules for individual training
- Public education (non-technical audiences)
- Courses and tutorials offered by professional societies
- International dimension

Examples : IGERT projects

Focus on interdisciplinary fellowships, research and education
Each IGERT (Integrative Graduate Education, Research and Training)
provide support for > 12 interdisciplinary graduate fellowships / site.

- **NEAT (Nanophases in the Environment, Agriculture and Technology)**
University of California -Davis (A. Novrotski)
- **Nanostructural Materials and Devices**
City University of New York (D.L. Akins)
- **Nanobiotechnology**
University of Washington (A. Vogel)
- **Nanoparticle Science and Engineering**
University of Minnesota (U. Kortshagen)
- **11 sites in FY 2002 (4 since 2001, and 4 since 2002)**

Nanotechnology Undergraduate Education (NUE)

New component of the 2003-2005 NSF Nanoscale Science and Engineering program is focused on:

- Introductory undergraduate courses
development of text, software, laboratory experiments, and web-based resources
- Development and dissemination of teaching modules for existing undergraduate courses, particularly during first and second year studies.

About 90 awards in FY 2003 – FY 2005

Workshop on 9/11-12/02

(www.nanofab.psu.edu/education/nsf-nue-program.htm)

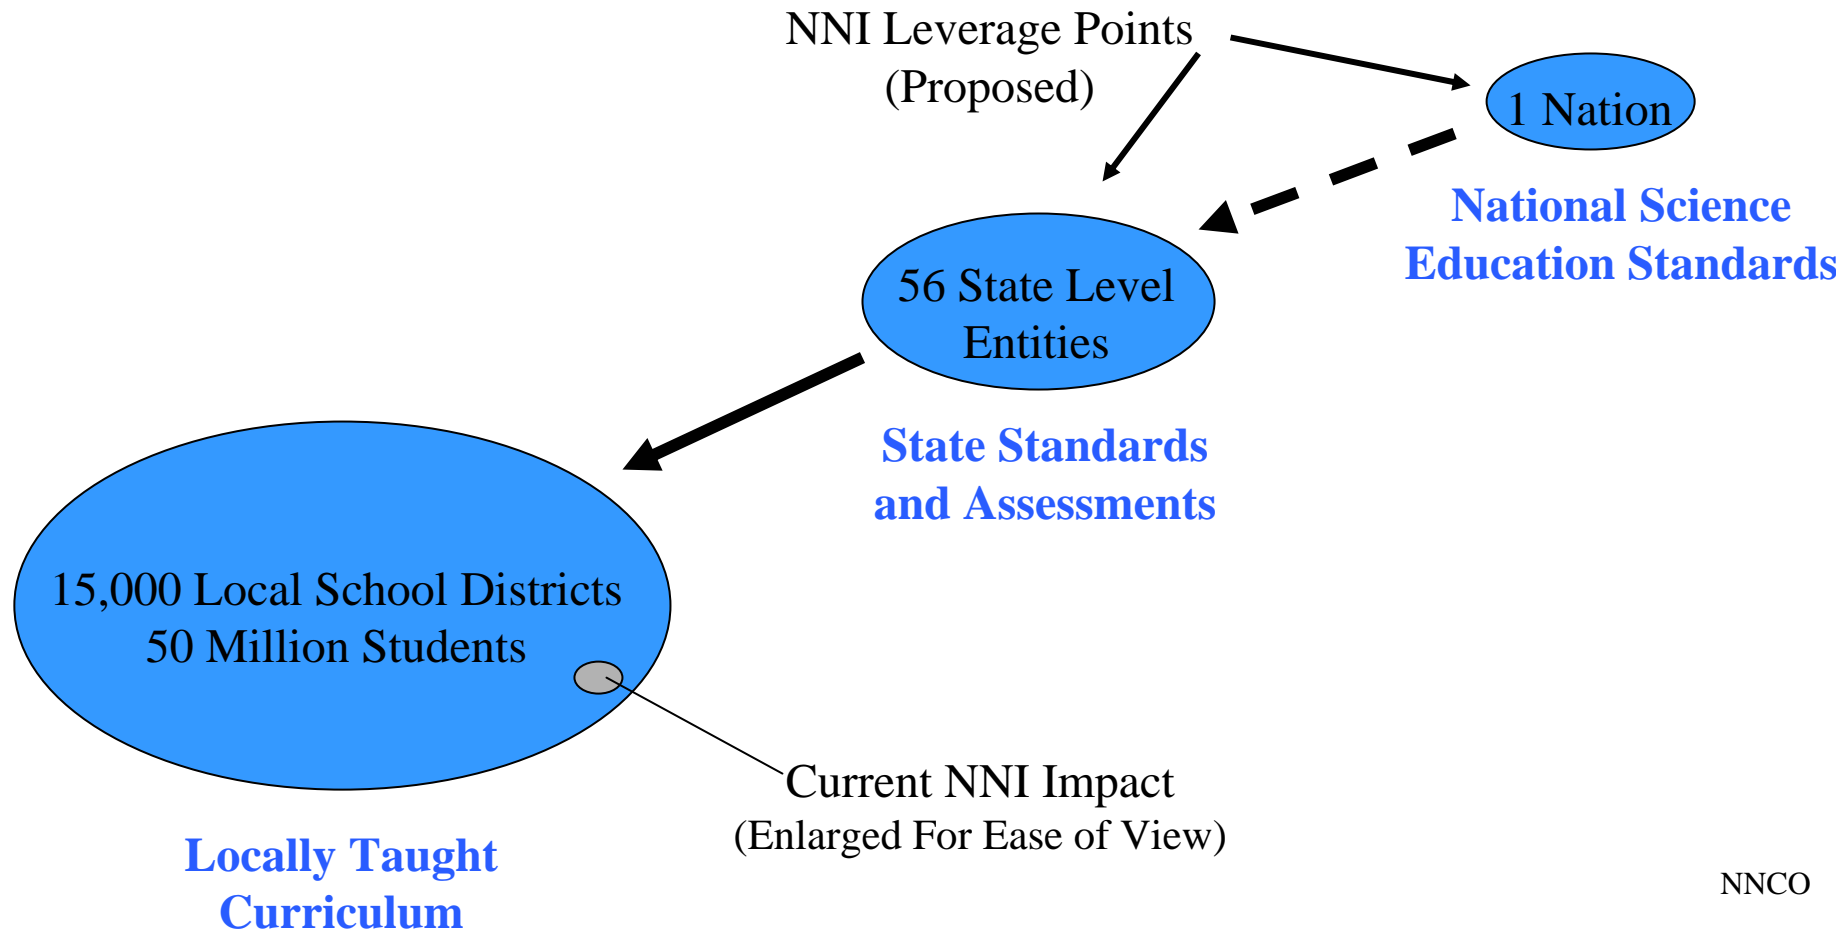

K-12 NANOTECHNOLOGY Education Modules
